

**Great Basin Priority Summary - Based on Most Recent 209's
7/2/21**

Priority	Unit ID	Incident	Suppression Strategy	Descriptive Location	Size	24 hr Change	% Ctn	Expected Ctn Date	Complexity / IC Name	Crews		Helicopters			Total # Persons	Critical Needs	Threats
										T-1	T-2IA or 2	T-1	T-2	T-3			
New and Emerging Initial Attack Incidents																	
	UT-FIF	Monk Springs	Full Suppression	5.5 mi SE of Kanosh, UT	40	NEW											
Ongoing Large Fires – Prioritized for Resource Commitment																	
	NV-HTF	East Fork	Full Suppression	4 mi SE of Mesa Vista, CA	300	+265								170			Structures 10 mi in front of fire
Ongoing Long Duration Fires – Not Being Prioritized for Resource Commitment																	
	ID-SCF	Fritzer (weekly update)	Monitor (25%) Full Suppression (75%)	15 mi NE of Salmon, ID	137	0	75%	7/4/21	Type 5 IC Balliett	0	0	0	0	0	15	None	
Notes of Significance *** Fires highlighted in yellow have submitted a FINAL ICS-209 or will no longer meet criteria to be prioritized																	
	UT-MLF	Pack Creek	Full Suppression	14 mi SE of Moab, UT	8,952	0	100%	7/31/21	Type 3 IMT Terry Gardner JB Clay (T)	0	0	0	0	1	55	None	Communities & Structures threatened. Evacuations in place. Road/Trail/Area closures.

Evening Brief

Date: July 2nd, 2021

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	PL 3	Light-Moderate Initial Attack Activity
National	PL 4	New Fires and Acres: 42 fires for 77.86 acres / 265 acres Large Fire Growth

Weather Summary:

... Mixed Wet/Dry Thunderstorms Through Sunday then Drier Next Week ...

... Breezy Winds for Nevada into Idaho by Mid-Week ...

On Saturday, thunderstorms will push further north and increase in coverage over Northern Nevada into Southern Idaho with more isolated storms in Utah and Central and Eastern Idaho/Wyoming with a drying trend pushing into the south. **Overnight Saturday night into Sunday morning some thunderstorms may affect parts of the Sierra Front into Western and Northern Nevada. Most of these areas have seen recent moisture from thunderstorms, however it still needs to be monitored due to faster moving drier storms as a weak upper-level disturbance moves through California.**

By Sunday thunderstorms will mostly be located over Southern and Eastern Idaho, the northern half of Nevada with isolated storms across Utah. Some of these storms may linger overnight. Drier air spreads across the Great Basin by Monday with only a few storms possible in the far eastern portion of the geographic area followed by a few days of drying across most of the Great Basin. With the significant amount of lightning that has occurred over the past few days and upcoming days, there is concern that holdovers will emerge as conditions warm and dry.

Isolated thunderstorms may start returning by mid to late next week over parts of the southern half of the Great Basin with also an increase in wind over parts of Nevada into Idaho by mid-week which could further stir up holdovers from recent lightning.

Fuels/Fire Potential:

... Fuels and Fire Behavior Advisory in effect for Utah, the Arizona Strip and Southern/Eastern/Central Nevada ...

Recent moisture has at least temporarily taken the edge off of the one-time extremely critical fuel levels across far southern and eastern areas of the Great Basin...and as some thunderstorms produce wetting rains further northward, this trend in temporary fuel modification will shift northwards as well. Currently the most critical fuels are across Idaho and Western and Northern Utah...where there is the greatest potential for lightning ignitions through the weekend. Initial attack will remain elevated through this weekend due to lightning and the holiday and will likely pick up next week due to drier weather and increasing winds.

Live Fuel moisture in low elevation brush, from parts of Idaho's Snake River Plains on southward remain critically dry, 60-100% in most areas, which correlates with extreme fire behavior. However, the gradually increasing moisture from south to north through this weekend will temporarily dampen fire potential in the short term across some of these areas. Heavier 1000-hr fuels remain at critical levels, near record dry in some areas, so once drier air finally returns to the region next week, fire potential will quickly increase once again. Hence the Fuel and Fire Behavior Advisory remains in place for those areas.

Resources:

Aviation within the Great Basin

- 0 VLAT, 2 LATs, 0 CL-415
- 22 SEATs, 2 FB, 9 AA, 0 ASM, 0 LP
- 10 Type 1 Helicopters / 7 Comm.
- 5 Type 2 Helicopters / 5 Comm.
- 18 Type 3 Helicopters / 12 Comm.

Crews Committed within the Great Basin

- 7 IHCs / 1 Available / 4 R&R
- 15 Type 2IA / 4 Available / 0 R&R
